Subject: question -- advocate email engagement with Administrator

Alison –

Our Bristol Bay advocates would like to direct some email engagement with the Administrator on Pebble Mine. Given it is not on the docket, there is not a portal/inbox for public comment. I also couldn't find a general email/public comment addy for the Administrator. It seems unwise to use an individual's email address so I'm hoping you might have a general comment email addy for this effort you could share. Thank you, in advance, for any guidance you might have.

Subject: United Tribes of Bristol Bay Meeting request on Pebble Mine 404 (c) veto

Good afternoon –

I would like to request a meeting on behalf of United Tribes of Bristol Bay to discuss EPA moving forward with a 404 (c) veto for the Pebble Mine in Alaska. I hope you are in receipt of their formal request for this action in the attached email. Understanding that you are still staffing up the Agency, we stand ready to meet when your schedule allows. However, given that the Obama Administration ran out of time to complete this process, we are eager to discuss next steps to ensure there is adequate time to initiate and complete the process in the next two years.

Thank you, in advance, for your attention to this request.

Sincerely,

Amelia Jenkins

Subject: Meeting Request - The Conservation Alliance - Sept. 21 or 22

John, Alison, and Juan –

I'm reaching out (again!) on behalf of the Bristol Bay Defense Fund. I wanted to make you aware that TWO different requests for meetings have gone into EPA from Bristol Bay advocates. The Bristol Bay Native Corporation (BBNC) has asked to meet with Assistant Administrator Fox to discuss specific issues of interest to BBNC and United Tribes of Bristol Bay (UTTB). I believe that meeting is in the process or has been scheduled.

Separately, the Conservation Alliance sent a request (below) to meet with the Administrator. This would be an opportunity for both the Administrator and Assistant Administrator to meet the range of proponents for the protection of Bristol Bay. Our thinking is that we can keep the large group meeting short and very high level. It certainly would mean a lot to the people flying in from Alaska and across the country to have the opportunity to thank the Administrator and Assistant Administrator in person.

Thank you, in advance, for considering this request – and I hope it cleared up any confusion about why you are getting different requests. Please don't hesitate to reach out to me or Erin Gaines (contact info below) with any questions.

Hi Aaron,

I just wanted to touch base about our meeting request and also loop in my colleague Norah so you have her contact information, as I'll be going on maternity leave starting at the end of next week (or earlier).

The group from The Conservation Alliance would be very appreciative of Administrator Regan's time and the opportunity to talk with him about their priorities.

Looking forward to hearing from you.

Thank you!

Erin

Aaron,

I sent the below meeting request to Kathleen this morning and received her out of office message with your contact information. I wanted to connect with you to ensure we had enough time to schedule a meeting with Administrator Regan. Please let me know if he has time on Wednesday, September 21 or Thursday, September 22 to meet with The Conservation Alliance.

Best,

Erin

Subject: Meeting Request - The Conservation Alliance - Sept. 21 or 22

To: <Lance.Kathleen@epa.gov>

Good Morning,

A group of business leaders with The Conservation Alliance will be in Washington, D.C. for a fly-in on September 21 and 22 and would like to request a meeting with Administrator Regan to discuss several priority campaigns related to the protection of public lands and waters.

The Conservation Alliance represents a coalition of businesses that fund and advocate for the protection of North America's wild places. This year, The Conservation Alliance is investing in and advocating for four priority campaigns, including Bristol Bay, the Boundary Waters, and the protection of the Dolores River.

If Administrator Regan has time on Wednesday, September 21 or Thursday, September 22 to meet with The Conservation Alliance, we'd greatly appreciate it.

Thank you for your consideration and looking forward to confirming soon.

Best,

Erin Gaines

EPA Announces New Steps in Process to Protect Bristol Bay Watershed Under Clean Water Act Authority

WASHINGTON (Sept. 9, 2021) – Today, EPA took an important step in seeking to reinitiate the process of making a Clean Water Act (CWA) Section 404(c) determination to protect certain waters in Bristol Bay, Alaska. If such a determination is finalized, it would protect waters over the long term that are essential to commercial, subsistence, and recreational fisheries and other activities that support Alaska Natives and communities in the state.

“The Bristol Bay Watershed is an Alaskan treasure that underscores the critical value of clean water in America,” said **EPA Administrator Michael S. Regan**. “Today’s announcement reinforces once again EPA’s commitment to making science-based decisions to protect our natural environment. What’s at stake is preventing pollution that would disproportionately impact Alaska Natives, and protecting a sustainable future for the most productive salmon fishery in North America.”

Under the previous administration, EPA issued a July 2019 notice withdrawing its 2014 Proposed Determination issued under CWA Section 404(c). This action terminated the review process for Bristol Bay.

A recent Ninth Circuit court decision found that EPA can withdraw a Proposed Determination “only if the discharge of materials would be unlikely to have an unacceptable adverse effect.” The agency believes the 2019 withdrawal notice did not meet the Ninth Circuit’s standard. On remand from the

Ninth Circuit, the Alaska federal district court recently directed EPA to file a proposal for additional court proceedings by September 10, 2021.

Today, the U.S. Department of Justice, in a filing in the district court, is announcing EPA's intent to request that the 2019 withdrawal notice be remanded and vacated. If the court grants the motion, remand and vacatur would automatically reinstate EPA's 404(c) review process and the agency would announce a schedule for resuming a process to protect certain waters in the Bristol Bay watershed—including opportunities for public input.

Bristol Bay supports commercial, subsistence, and recreational fisheries that are worth hundreds of millions of dollars each year and create thousands of jobs. Bristol Bay's fishery resources have supported a subsistence-based way of life for Alaska Natives for over 4,000 years.

The Bristol Bay watershed is an area of exceptional ecological value with salmon fisheries unrivaled anywhere in North America. The region's streams, wetlands, lakes and ponds provide essential habitat that support all five species of Pacific salmon found in North America: coho, Chinook, sockeye, chum, and pink. The salmon populations are critical to the health of the entire ecosystem, which is home to more than 20 fish species, 190 bird species, and more than 40 terrestrial mammal species, including bears, moose, and caribou.

Background

The Clean Water Act generally requires a Section 404 permit from the U.S. Army Corps of Engineers to authorize a discharge of dredged or fill material into certain streams, wetlands, lakes and ponds. Section 404 directs EPA to develop the environmental criteria used to make permit decisions.

The U.S. Army Corps of Engineers authorizes thousands of Section 404 permits every year, and EPA works with the Corps and developers to resolve environmental concerns so projects can move forward. However, the Clean Water Act, in Section 404(c), also authorizes EPA to prohibit or restrict fill activities if EPA determines a discharge would have an unacceptable adverse effect on certain resources.

EPA has used its Section 404(c) authority sparingly, issuing final determinations only 13 times in the CWA's 50-year history. The agency's use of the authority has typically involved major projects with significant impacts on some of America's most ecologically valuable waters.

Subject: EPA meeting Request: Alaska Tribal Leaders, Native Corporation Leaders and Conservation Alliance

Rosemary and Dan,

Thank you so much for helping work through a somewhat complicated multi-coalition fly-in next week! It means a lot to the Tribal and Native Corporation leaders who will have traveled a great distance. And of course, the member companies from the Conservation Alliance crew will be grateful as well.

To quickly summarize the request: The United Tribes of Bristol Bay, The Bristol Bay Native Corporation, Commercial Fishermen for Bristol Bay, and Conservation Alliance member companies are seeking a joint meeting with EPA leadership to discuss Bristol Bay issues when in D.C. next Wednesday.

(I should note that -- separately -- the Office of Water has a meeting on the books next week with the Alaska Tribal and Native Corporation leaders only, which is appropriate to limit to those constituencies. But this particular meeting we are discussing here would be a broader group that also includes non-native allies from the Conservation Alliance.)

I'm rather hoping we can find a way to engage Administrator Regan in this meeting, but I understand there are some complicated and fluid travel obligations with Climate Week, and we certainly understand if that proves impossible. It would be wonderful if in lieu of the Administrator, perhaps the Deputy Administrator, or either or both of you could attend. But I leave to your good judgement who might be appropriate and available.

(It would also be perfectly fine and appropriate for the Office of Water to join in addition, but just noting they will see a portion of this group at another time next week.)

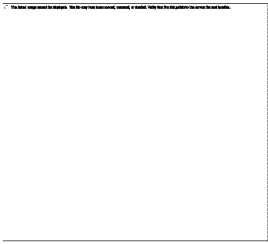

In terms of day and time, Wednesday afternoon would be best for the collective group, though there are some times in the morning that could work. I'll note the Office of Water meeting is at 2:00 PM ET on Wednesday, so if this meeting could be shortly before or after that time, it might be ideal from a logistics standpoint.

The exact roster would depend on the time we land on, as we're dividing up folks for meetings in the administration and on the hill. But it would include board members from the United Tribes of Bristol Bay, board members from the Bristol Bay Native Corporation, member companies from the Conservation Alliance (e.g. Patagonia, North Face, Yeti), and appropriate coalition and tribal staff.

We can, of course, work with you on an exact roster and would be happy to ensure the right number of people to fit what's possible.

Thank you again for helping us navigate this, and please don't hesitate to reach out to me or Amelia with any questions!

Best,
dk

But it would include board members from the United Tribes of Bristol Bay, board members from the Bristol Bay Native Corporation, member companies from the Conservation Alliance (e.g. Patagonia, North Face, Yeti), and appropriate coalition and tribal staff.

We can, of course, work with you on an exact roster and would be happy to ensure the right number of people to fit what's possible.

Thank you again for helping us navigate this, and please don't hesitate to reach out to me or Amelia with any questions!

Best,

dk

EPA Announces New Steps in Process to Protect Bristol Bay Watershed Under Clean Water Act Authority

WASHINGTON (Sept. 9, 2021) – Today, EPA took an important step in seeking to reinitiate the process of making a Clean Water Act (CWA) Section 404(c) determination to protect certain waters in Bristol Bay, Alaska. If such a determination is finalized, it would protect waters over the long term that are essential to commercial, subsistence, and recreational fisheries and other activities that support Alaska Natives and communities in the state.

“The Bristol Bay Watershed is an Alaskan treasure that underscores the critical value of clean water in America,” said **EPA Administrator Michael S. Regan**. “Today’s announcement reinforces once again EPA’s commitment to making science-based decisions to protect our natural environment. What’s at stake is preventing pollution that would disproportionately impact Alaska Natives, and protecting a sustainable future for the most productive salmon fishery in North America.”

Under the previous administration, EPA issued a July 2019 noticewithdrawing its 2014 Proposed Determination issued under CWA Section 404(c). This action terminated the review process for Bristol Bay.

A recent Ninth Circuit court decision found that EPA can withdraw a Proposed Determination “only if the discharge of materials would be unlikely to have an unacceptable adverse effect.” The agency believes the 2019 withdrawal notice did not meet the Ninth Circuit’s standard. On remand from the Ninth Circuit, the Alaska federal district court recently directed EPA to file a proposal for additional court proceedings by September 10. Today, the U.S. Department of Justice, in a filing in the district court, is announcing EPA’s intent to request that the 2019 withdrawal notice be remanded and vacated. If the court grants the motion, remand and vacatur would automatically reinitiate EPA’s 404(c) review process and the agency would announce a

schedule for resuming a process to protect certain waters in the Bristol Bay watershed—including opportunities for public input.

Bristol Bay supports commercial, subsistence, and recreational fisheries that are worth hundreds of millions of dollars each year and create thousands of jobs. Bristol Bay's fishery resources have supported a subsistence-based way of life for Alaska Natives for over 4,000 years.

The Bristol Bay watershed is an area of exceptional ecological value with salmon fisheries unrivaled anywhere in North America. The region's streams, wetlands, lakes and ponds provide essential habitat that support all five species of Pacific salmon found in North America: coho, Chinook, sockeye, chum, and pink. The salmon populations are critical to the health of the entire ecosystem, which is home to more than 20 fish species, 190 bird species, and more than 40 terrestrial mammal species, including bears, moose, and caribou.

Background

The Clean Water Act generally requires a Section 404 permit from the U.S. Army Corps of Engineers to authorize a discharge of dredged or fill material into certain streams, wetlands, lakes and ponds. Section 404 directs EPA to develop the environmental criteria used to make permit decisions.

The U.S. Army Corps of Engineers authorizes thousands of Section 404 permits every year, and EPA works with the Corps and developers to resolve environmental concerns so projects can move forward. However, the Clean Water Act, in Section 404(c), also authorizes EPA to prohibit or restrict fill activities if EPA determines a discharge would have an unacceptable adverse effect on certain resources.

EPA has used its Section 404(c) authority sparingly, issuing final determinations only 13 times in the CWA's 50-year history. The agency's use of the authority has typically involved major projects with significant impacts on some of America's most ecologically valuable waters.

Subject: EPA meeting Request: Alaska Tribal Leaders, Native Corporation Leaders and Conservation Alliance

Rosemary and Dan,

Thank you so much for helping work through a somewhat complicated multi-coalition fly-in next week! It means a lot to the Tribal and Native Corporation leaders who will have traveled a great distance. And of course, the member companies from the Conservation Alliance crew will be grateful as well.

To quickly summarize the request: The United Tribes of Bristol Bay, The Bristol Bay Native Corporation, Commercial Fishermen for Bristol Bay, and Conservation Alliance member companies are seeking a joint meeting with EPA leadership to discuss Bristol Bay issues when in D.C. next Wednesday.

(I should note that -- separately -- the Office of Water has a meeting on the books next week with the Alaska Tribal and Native Corporation leaders only, which is appropriate to limit to those constituencies. But this particular meeting we are discussing here would be a broader group that also includes non-native allies from the Conservation Alliance.)

I'm rather hoping we can find a way to engage Administrator Regan in this meeting, but I understand there are some complicated and fluid travel obligations with Climate Week, and we certainly understand if that proves impossible. It would be wonderful if in lieu of the Administrator, perhaps the Deputy Administrator, or either or both of you could attend. But I leave to your good judgement who might be appropriate and available.

(It would also be perfectly fine and appropriate for the Office of Water to join in addition, but just noting they will see a portion of this group at another time next week.)

In terms of day and time, Wednesday afternoon would be best for the collective group, though there are some times in the morning that could work. I'll note the Office of Water meeting is at 2:00 PM ET on Wednesday, so if this meeting could be shortly before or after that time, it might be ideal from a logistics standpoint.

The exact roster would depend on the time we land on, as we're dividing up folks for meetings in the administration and on the hill. But it would include board members from the United Tribes of Bristol Bay, board members from the Bristol Bay Native Corporation, member companies from the Conservation Alliance (e.g. Patagonia, North Face, Yeti), and appropriate coalition and tribal staff.

We can, of course, work with you on an exact roster and would be happy to ensure the right number of people to fit what's possible.

Thank you again for helping us navigate this, and please don't hesitate to reach out to me or Amelia with any questions!

EPA Announces New Steps in Process to Protect Bristol Bay Watershed Under Clean Water Act Authority

WASHINGTON (Sept. 9, 2021) – Today, EPA took an important step in seeking to reinstate the process of making a Clean Water Act (CWA) Section 404(c) determination to protect certain waters in Bristol Bay, Alaska. If such a determination is finalized, it would protect waters over the long term that are essential to commercial, subsistence, and recreational fisheries and other activities that support Alaska Natives and communities in the state.

“The Bristol Bay Watershed is an Alaskan treasure that underscores the critical value of clean water in America,” said **EPA Administrator Michael S. Regan**. “Today’s announcement reinforces once again EPA’s commitment to making science-based decisions to protect our natural environment. What’s at stake is preventing pollution that would disproportionately impact Alaska Natives, and protecting a sustainable future for the most productive salmon fishery in North America.”

Under the previous administration, EPA issued a July 2019 notice withdrawing its 2014 Proposed Determination issued under CWA Section 404(c). This action terminated the review process for Bristol Bay.

A recent Ninth Circuit court decision found that EPA can withdraw a Proposed Determination “only if the discharge of materials would be unlikely to have an unacceptable adverse effect.” The agency believes the 2019 withdrawal notice did not meet the Ninth Circuit’s standard. On remand from the Ninth Circuit, the Alaska federal district court recently directed EPA to file a proposal for additional court proceedings by September 10. Today, the U.S. Department of Justice, in a filing in the district court, is announcing EPA’s intent to request that the 2019 withdrawal notice be remanded and vacated. If the court grants the motion, remand and vacatur would automatically reinstate EPA’s 404(c) review process and the agency would announce a schedule for resuming a process to protect certain waters in the Bristol Bay watershed—including opportunities for public input.

Bristol Bay supports commercial, subsistence, and recreational fisheries that are worth hundreds of millions of dollars each year and create thousands of jobs. Bristol Bay’s fishery resources have supported a subsistence-based way of life for Alaska Natives for over 4,000 years.

The Bristol Bay watershed is an area of exceptional ecological value with salmon fisheries unrivaled anywhere in North America. The region’s streams, wetlands, lakes and ponds provide essential habitat that support all five species of Pacific salmon found in North America: coho, Chinook, sockeye, chum, and pink. The salmon populations are critical to the health of the entire ecosystem, which is home to more than 20 fish species, 190 bird species, and more than 40 terrestrial mammal species, including bears, moose, and caribou.

Background

The Clean Water Act generally requires a Section 404 permit from the U.S. Army Corps of Engineers to authorize a discharge of dredged or fill material into certain streams, wetlands, lakes and ponds. Section 404 directs EPA to develop the environmental criteria used to make permit decisions.

The U.S. Army Corps of Engineers authorizes thousands of Section 404 permits every year, and EPA works with the Corps and developers to resolve environmental concerns so projects can move forward. However, the Clean Water Act, in Section 404(c), also authorizes EPA to prohibit or restrict fill activities if EPA determines a discharge would have an unacceptable adverse effect on certain resources.

EPA has used its Section 404(c) authority sparingly, issuing final determinations only 13 times in the CWA’s 50-year history. The agency’s use of the authority has typically involved major projects with significant impacts on some of America’s most ecologically valuable waters.
